EDUCATION

University of Maryland

College Park, MD

B.S. in Computer Science, Minor in Robotics and Autonomous Systems and Climate Change Fluency May 2027

Coursework: Algorithms, Data Structures, Comp. Systems, OOP, Organization of Programming Languages, Discrete Structures, Comp. Vision, Data Science, Linear Algebra, Statistics, Calculus I-II, Diff. Equations

TECHNICAL SKILLS

Languages: Java, Python, C++, C, OCaml, Rust, HTML, Go, JavaScript, TypeScript, SQL

Technologies/Frameworks: React, FastAPI, AWS, Ruby on Rails, Docker, Supabase, Next.js, Git, Pandas, Linux

EXPERIENCE

Pinterest

June 2026 – August 2026

Incoming Software Engineer Intern

Remote

- Engineered a log ingestion pipeline using BuildKite webhooks, Python, and Kafka to process 30,000+ failed CI job logs per month for internal developer analytics
- Analyzed 100+ GB of CI/CD logs data in AWS S3 with boto3 and BuildKite API to estimate infrastructure costs

RAAS Lab

February 2026 – Present

Undergraduate Drone Researcher

College Park, MD

- Building a drone that translates natural language into movement using ROS, Gazebo, Isaac Sim, and Jetson Nano

Amazon Leo

February 2025 – May 2025

Software Engineer

College Park, MD

- Deployed a web app to visualize optimal transmitter sites for Amazon's 3,000+ LEO satellites using ML insights
- Built a secure authentication system with FastAPI and React, supporting 2,000+ employee sign-ups
- Integrated Mapbox API for address auto complete and custom map layers, with 5,000+ monthly map loads
- Designed a PostGIS database schema to manage geolocation points, supporting 1,000+ monthly CRUD operations
- Integrated AWS SES with FastAPI to deliver 1,000+ monthly CSV exports of geospatial data
- Dockerized and deployed the app to AWS ECS/ECR with GitHub Actions CI/CD, achieving 99%+ uptime

National Institute of Standards and Technology

August 2023 – August 2025

Software Engineer Intern

Gaithersburg, MD

- Built a Raspberry Pi embedded system monitoring dehumidifier efficiency for 200+ field units
- Integrated a load cell, watt meter, and temperature/humidity sensors using serial and I2C communication
- Developed Python services with AWS IoT Core to transmit HVAC data to the cloud, enabling automated analytics

PROJECTS

Tesla FleetNet Project

January 2025

- Created a Ruby on Rails project using Tesla's FleetNet API to get basic energy metrics on Tesla cars

CareerAtlas - JPMorganChase Code for Good Hackathon

November 2025

- Selected from 12,000+ applicants; created a full-stack app using Next.js and Mapbox to improve economic mobility
- Integrated LangChain to enable LLM-powered natural-language queries, supporting data-driven decisions

One Cut Above Mobile App

September 2025 – Present

Project Lead & Software Engineer

College Park, MD

- Led a team of 7 to deploy a mobile booking app for a local barber using React Native, Supabase, and Square API
- Automated 30,000+ yearly appointments, saved \$40,000+ annually, and reduced coordination times by 90%
- Met with the client 15+ times over 6 months to define business requirements, pitch solutions, and present demos

Craving Hour Halal Website and Mobile App

May 2025 – August 2025

Project Lead & Software Engineer

College Park, MD

- Built a full-stack website for a local food truck, using React, SQL, and AWS, serving 3,000+ monthly users
- Built an app with React Native, FastAPI, PostgreSQL, and AWS (S3, Lambda), enabling no-code website updates

LEADERSHIP/EXTRACURRICULAR

Project LIFT - Founder

May 2025 – Present

- Leading 40+ students to deliver software solutions for 8+ local small businesses, generating \$50,000+ in value
